How to submit data to databank

- 1) Get a online submission form by using "getinfo".

```
% getinfo
...
item ? DDBJ_news*           # choose DDBJ-news
...
item ? data_submit         # choose data_submit
...
item ? ddbj-form           # choose ddbj-form

page ... : h               # get help
...
page ... : s ddbj-form     # save ddbj-form into "ddbj-form"

page ... : q               # quit
item ? q                   # quit getinfo
item ? q
%
% ls -li ddbj-form         # make sure there is a ddbj-form
```

- 2) Transfer ddbj-form into your PC; it is assumed that kermit is used at the PC.

```
% kermit
C-Kermit> server           # enter server mode
...
(Type ctrl-] c. to get ms-kermit command mode.)
Kermit-MS> get
Remote Source File: ddbj-form
Local Destination File: ddbj.frm
...
Kermit-MS> finish
Kermit-MS> connect

C-Kermit> exit
%
```

- 3) Edit ddbj.frm at your PC; put DNA sequences and others at the end of form.

Your electronic mail address is
your-loginname%niguts.nig.junet@vax2.nlm.nih.gov
if you have an account for the "niguts". Otherwise, leave
its field blank.

- Please be careful to make files readable by any program; especially if you make it in PC.
- Files must be simple text files; nondocument-open for Word Star.
- Each line must be shorter than 80 characters and ended by <CR> and/or <LF>.
- If you want to use floppy for data submission, please don't forget to format floppy disk compatibly with IBM-PC; see "ibm-pc floppy".
- You may obtain a floppy diskette of submission form from the DDBJ.

- 4) Send ddbj.frm to the host computer; it is assumed that kermit is used at the PC.

```
% kermit
C-Kermit> server
...
(Type ctrl-] c. to get ms-kermit command mode.)
Kermit-MS> set EOF ctrl-Z
Kermit-MS> send ddbj.frm ddbj.frm
...
Kermit-MS> finish
Kermit-MS> connect
```

```
C-Kermit> exit
% conv -filter ddbj.frm          # remove ctrl-Z EOF marks.
% pg ddbj.frm    #make sure that it has correctly been transformed
```

5) Send ddbj.frm to an appropriate databank by electronic mail.

The data banks agreed to share journals that each data bank scans for data entry. So, if your data is published in one of those journals, please submit your data to the data bank that is in charge of that journal. "journal-list" shows what journals each data bank scans.

```
Mailing address (...@niguts.nig.junet):
  ddbjsub or DDBJsub    data submission to DDBJ
  emblsub or EMBLsub   data submission to EMBL
  gbsub or Gbsub       data submission to GenBank
```

Example:

```
% mailx -s "Data submission" emblsub $LOGNAME <ddbj.frm
% (wait 30 sec)
% mailx
```

```
...
? (type mail number to see the copy of the mail that you have sent to
  "emblsub".
```

```
...
? q
%
```

6) You will get an acknowledge from the databank within a few days by electronic mail.

6) Thanks for your cooperation.
